Claims 14 and 15 are amended as indicated below.

The amendments are as follows:

14. (Currently Amended) A ~~program~~ computer readable medium comprising recorded instructions, which if executed would cause a method to be performed for obtaining data for calibration of a camera capable of varying optical conditions, using a plurality of images of a calibration chart comprising first marks and second marks, the first marks being more easily recognized than the second marks, the images being photographed with said camera under varied optical conditions, ~~said program being for making a computer function as the method comprising:~~

~~a mark extracting means for extracting said second marks from said images photographed respectively under the varied optical conditions in at least three different photographing angles, the photographing angles being set by using said first marks of said chart;~~

~~an internal parameter calculating means for calculating data for calibration under optical conditions under which said images of said chart were photographed based on the positions of said second marks extracted by said mark extracting means; and~~

~~an internal parameter function calculating means for calculating data for calibration corresponding to said varied optical photographing conditions of said camera, using said data for calibration ~~calculated in said internal parameter calculating means~~ and a plurality of optical conditions under which said images of said chart were photographed.~~

15. (Currently Amended) A computer readable ~~recording medium~~ comprising recorded instructions, which if executed would cause a method for measuring data for calibration to be performed, comprising: in which a program for measuring data for calibration is stored,

~~said program being for obtaining data for calibration of a camera capable of varying its optical conditions, said data for calibration being obtained, using a plurality of images of a calibration chart comprising first marks and second marks, the first marks being more easily recognized than the second marks, the images being photographed with said camera under varied optical conditions; ~~said program being for making a computer function as~~~~
